J. MOI. BIO1. 272:253-265(1997).

IN FUNCTION: SERVES TO PROTECT THE VIRUS AGAIN:
INHIBITING BOTH CLASSICAL AND ALTERNATIVE P.
ACTIVATION. BINDS C3B AND C4B.

IS SIMILARITY: BELONGS TO THE SUPERFAMILY OF T.
COMPLEMENT ACTIVATION (RCA).

IC SIMILARITY: CONTAINS 4 SUSHI (SCR) REPEATS.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            01-JUL-1989 (Rel. 11, Created)

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Herrmann S.M., Ricard S., Nicaud V., Mallet C., Evans A.,
Ruidavets J.B., Arveiler D., Luc G., Cambien F.;
"The P-selectin gene is highly polymorphic: reduced frequency of the
Pro715 allele carriers in patients with myocardial infarction.";
Hum. Mol. Genet. 7:1277-1284(1998)
-i- FUNCTION: CA(2+)-DEPENDENT RECEPTOR FOR MYELOID CELLS THAT BINDS
TO CARRAGES ON NEUTROPHILS AND MONOCYTES. MEDIATES THE
INTERACTION OF ACTIVATED ENDOTHELIAL CELLS OR PLATELETS WITH
LEUKOCYTES. THE LICAND RECOGNIZED IS STAUYL-LEWIS X.
-i- SUBCELLULAR LOCATION: TYPE I MEMBRANE PROTEIN.
-i- SUBCELLULAR LOCATION: TYPE I MEMBRANE PROTEIN.
-i- TISSUE SPECIFICITY: STORED IN THE ALPHA-GRANULES OF PLATELETS
AND WEIBEL-PALADE BODIES OF ENDOTHELIAL CELLS. UPON CELL.
AND WEIBEL-PALADE BODIES OF ENDOTHELIAL CELLS. UPON CELL
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  use by non-profit institutions as long as its content is in no way modified and this statement is not removed. BETA-2-GLYCOPROTEIN I PRECURSOR (APOLIPOPROTEIN H) (APO-H) (ACTIVATED PROTEIN C-BINDING PROTEIN) (APC INHIBITOR) (B2GPI).
                                                      Kristensen T.;

"Structure of the human beta-2-glycoprotein I gene.";

Submitted (FEB-1997) to the EMBL/GenBank/DDBJ databases.

"I FUNCTION: BINDS TO VARIOUS KINDS OF NEGATIVELY CHARGED SUBSTANCES SUCH AS HEPARIN, PHOSPHOLIPIDS, AND DEXTRAN SULFATE. MAY PREVENT ACTIVATION OF THE INTRINSIC BLOOD COAGULATION CASCADE BY BINDING TO PHOSPHOLIPIDS ON THE SURFACE OF DAMAGED CELLS.

"I TISSUE SPECIFICITY: PLASMA."

"I SIMILARITY: CONTAINS 4 SUSHI (SCR) REPEATS.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Mus musculus (Mouse).

C -!- FUNCTION: CA(2+) - DEPENDENT RECEPTOR FOR MYELOID CELLS THAT BINDS
C TO CARBOHYDRATES ON NEUTROPHILS AND MONOCYTES. MEDIATES THE
C INTERACTION OF ACTIVATED ENDOTHELIAL CELLS OR PLATELETS WITH
CC LUKCCYTES. THE LIGAND RECOGNIZED IS SIALLL-LEWIS X.

C -!- SUBCELLULAR LOCATION: TYPE I MEMBRANE PROTEIN.

CC LUNG, BRAIN, LIVER, HEART, KIDNEY, THYMUS, SMALL INTESTINE.
C -!- SIMILARITY: CONTAINS 1 EAGT-LIKE DOMAIN.

C -!- SIMILARITY: CONTAINS 1 EGF-LIKE DOMAIN.

-!- SIMILARITY: CONTAINS 1 EGF-LIKE DOMAIN.

-!- SIMILARITY: CONTAINS 8 SUSHI (SCR) REPEATS; RAT P-LECTIN LACKS THE

HUMAN SUSHI-2 EQUIVALENT.
